1. SPECIFICATIONS FOR HP7550 SERIES COLOR MONITOR

1. CRT : 43.2CM(17") 90 Deflection, 29mm Neck, 0.27mm Dot Pitch, Non-Glare Screen
2. Viewable image Size: 40.6CM (16") diagonal
3. Display Color: Unlimited Colors
4. External Controls:
Power On/Off, Power led, Function knob: Contrast, Brightness, H-Center, H-Size, V-Center, V-Size, Rotation, Pincushion, Trapezoid, Pin-Balance, Parallelogram, Color Temperature, Degaussing, Recall, Moire,
5. Input Video Signal

Factory Preset	#1	#2	#3	#4
Resolution	720*400	640*480	640*480	800*600
H (KHz)	31.327	31.469	43.3	46.875
V (Hz)	69.616	59.943	85.00	75.00
Factory Preset	#5	#6	#7	#8
Resolution	800*600	1024*768	1024*768	1152*864
H (KHz)	53.674	60.023	68.677	67.500
V (Hz)	85.061	75.029	84.997	75.000

6. Scanning Frequencies

Horizontal	30KHz ~ 70KHz
Vertical	50 Hz ~ 160 Hz

7. Factory Preset Timings: 8
- User Timings: 8
8. Video Bandwidth: 110 MHz
9. Power Source:
Switching Mode Power Supply
AC 90 ~264V, 50±3/60±3Hz Universal Type
10. Operating Temperature: 0°C to 40°C Ambient
11. Humidity: 20% to 80% Relative, Non-Condensing
12. External Connection:
15 Pin D-type Connector
AC Power Cord
13. The rotation can't be recall in user mode.

14. Main dimensions / weight:

	Monitor	Packed Monitor
Width:	410mm	515mm
Height:	402mm	464mm
Depth:	420mm	570mm
Weight:	15.5kg	17.5kg

15. Press the “MENU” funtion and don’t release it,then press power swith on,the monitor will enter the burn-in mode if it is no signal input.

16. Regulations/Safety:

- EN 60950 + EK1-ITB: GS-mark
- UL60950
- cUL CSA C22.2 No.60950
- VDE 0860 (implosion protection)
- CE-mark
- CB-certificate and test report according to IEC60950

The model is designed to reach following approvals:			
- EN 55022 class B and EN 55024			
- EN 61000-3-2& EN61000-3-3			
Test procedures	Standards	Requirements frequency range	Remarks
Conducted power-line emission	EN 55022 Class B FCC Part 15, Subq.B	150 kHz ~ 30 MHz 450 kHz ~ 30 MHz	
Radiation emission	EN 55022 Class B FCC Part 15, Subq.B	30 MHz ~ 1 GHz 30 MHz ~ 1 GHz	30 MHz ~ 2 GHz if clock > 108 MHz
Electrostatic (ESD)	EN 55024 IEC61000-4-2	- no functional disturbance: 8 kV air discharge	
Immunity to RF field strength	EN 55024 IEC61000-4-3	80 MHz ~ 1000 MHz 3V/m	modulation
Electrical fast transient	EN 55024 IEC61000-4-4	- no functional disturbance: 1 kV power cord 0.5kV signal cable	
SURGE	EN 55024 IEC61000-4-5		
CS	EN 55024 IEC61000-4-6		

2. PRECAUTIONS AND NOTICES

2-1 SAFETY PRECAUTIONS

1. Observe all caution and safety related notes located inside the display cabinet.
2. Operation of the display with the cover removed, may cause a serious shock hazard from the display power supply. Work on the display should not be attempted by anyone who is not thoroughly familiar with precautions necessary when working on high voltage equipment.
3. Do not install, remove or handle the picture tube in any manner unless shatter-proof goggles are worn. People who are not so equipped should be kept away while handling picture tube. Keep picture tube away from the body while handling.
4. The picture tube is constructed to limit X-RAY radiation to 0.5 mR/HR. For continued protection, use the designated replacement tube only, and adjust the voltages so that the designated maximum rating at the anode will not be exceeded.
5. Symbol “★” means safety relative parts. The use of substitute replacement parts which do not have the same characteristics as specified in the parts list may create shock, fire or explode etc.
6. Symbol “⚠” means X-ray relative parts. Before replacing any of these components please read the parts list in this manual carefully to avoid creating higher anode voltage or x-ray. Especially for sealed controls, such as VR902 and FBT screen VR etc, which were sealed by the manufacturer once their optimum position has been set, please don't dismantle them as you like, otherwise you will break or damage the component. If you need replace the parts with sealed control, please adjust the relative VR to make sure the B+ voltage about 66.0V and well seal it with A+B glue or equivalent, which you can not move away with one screw driver
7. Before returning a serviced display to the customer, a thorough safety test must be performed to verify that the display is safe to operate without danger or shock. Always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as screw heads.

Test method for current leakage is described as follow.

- (a) Plug the AC line cord directly into rated AC outlet (do not use a line isolation transformer during this check).
- (b) Use an AC voltmeter having 5000 ohms per volt or with more sensitivity in the following manner: Connect a 1500 ohms 10 Watt resistor, paralleled by a 0.15UF, AC type capacitor between a known good earth ground (water pipe, conduit, etc.) and the exposed metallic parts simultaneously. Measure the AC voltage across the combination of 1500 ohms resistor and 0.15UF capacitor.
- (c) Reverse the AC plug at the AC outlet and repeat AC voltage measurements for each exposed metallic part.
- (d) Voltage measured must not exceed 0.5 volts RMS. This corresponds to 0.35 millamp AC. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

2-2 PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety visual inspections and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Before replacing any of these components read the parts list in this manual carefully. The use of substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire, X-RAY radiation or other hazards.

2-3 SERVICE NOTES

1. When replacing parts or circuit boards, clamp the lead wires around terminals before soldering.
2. When replacing a high wattage resistor (more than 1/2W of metal oxide film resistor) in circuit board, keep the resistor about 10mm (1/2 in) away from circuit board.
3. Keep wires away from high voltage or high temperature components.
4. Keep wires in their original position so as to reduce interference.

2-4 HIGH VOLTAGE WARNING

Operation of monitor outside of cabinet or with back removed may cause a serious shock hazard. Work on this model should only be performed by those who are thoroughly familiar with precautions necessary when working on high voltage equipment.

Exercise care when servicing this chassis with power applied. Many B plus and high voltage terminals are exposed which, if carelessly contacted, can cause serious shock or result in damage to the chassis. Maintain interconnecting ground lead connections between chassis and picture tube dag when operating chassis.

Certain HV failures can increase X-ray radiation. Monitor should not be operated with HV levels exceeding the specified rating for the chassis type. The maximum operating HV specified for the chassis used in this monitor is

24.8KV ± 1KV

with a line voltage of 120/240 VAC. Higher voltage may also increase possibility of failure in HV supply.

It is important to maintain specified values of all components in the horizontal and high voltage circuits and anywhere else in the monitor that could cause a rise in high voltage or operating supply voltages. No changes should be made to the original design of the monitor. Components shown in the shaded areas on the schematic should be replaced with exact factory replacement parts. The use of unauthorized substitute parts may create a shock, fire or other hazard.

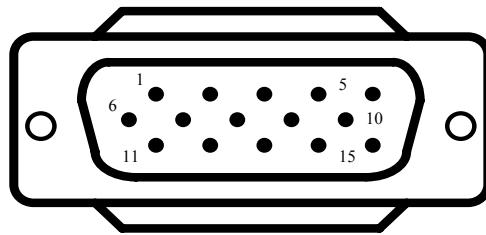

To determine the presence of high voltage, use accurate, high impedance, HV meter connected between second anode lead and CRT dag grounding device. When servicing the High Voltage System, remove static charge from it by connecting a 10K ohm resistor in series with an insulated wire (such as a test probe) between picture tube dag and 2nd anode lead.(AC line cord disconnected from AC power outlet.)

The picture tube used in this monitor employs integral implosion protection. Replace with tube of the same type number for continue safety. Do not lift picture tube by the neck. Handle the picture tube only after discharging the high voltage completely.

3. OPERATING INSTRUCTIONS

This procedure gives you instructions for installing and using the Color display.

1. Position the display on the desired operation and plug the power cord into a convenient AC outlet. Three-wire power cord must be shielded and is provided as a safety precaution as it connects the chassis and cabinet to the electrical conduit ground. If the AC outlet in your location does not have provisions for the grounded type plug, the installer should attach the proper adapter to ensure a safe ground potential.
2. Connect the 15-pin color display shielded signal cable to your signal system device and lock both screws on the connector to ensure firm grounding. The connector information is as follow:

15 - Pin Color Display Signal Cable

PIN NO.	DESCRIPTION	PIN NO.	DESCRIPTION
1.	RED	9.	5V
2.	GREEN	10.	SYNC. GND
3.	BLUE	11.	NC
4.	NC	12.	SDA
5.	SFTC	13.	HORIZ. SYNC
6.	GND-R	14.	VERT. SYNC (*VCLK)
7.	GND-G	15.	SCL
8.	GND-B		

3. Apply power to the display by turning the power switch to the "ON" position and allow about thirty seconds for display tube warm-up. The Power-On indicator lights when the display is on.
4. With proper signals feed to the display, a pattern or data should appear on the screen, adjust the brightness and contrast to the most pleasing display.
5. This monitor has power saving function following the VESA DPMS. Be sure to connect the signal cable to the PC.
6. If your color display requires service, it must be returned with the power cord.

4. ADJUSTMENT

4-1 ADJUSTMENT CONDITIONS AND PRECAUTIONS

1. Approximately 30 minutes should be allowed for warm up before proceeding.
2. Adjustments should be undertaken only on those necessary elements since most of them have been carefully preset at the factory.

4-2 MAIN ADJUSTMENTS

NO.	FUNCTION	LOCATION	DESIGNATION
1	B + ADJ	PCB - MAIN	VR902
2	SCREEN ADJ	FLY BACK TRANS	T402
3	FOCUS ADJ	FLY BACK TRANS	T402
4	ABL ADJ	FACTORY OSD	ABL FUNCTION
5	FUNCTION ADJ	- SELECT - DOWN (-) - UP (+) - MENU	PCB - MAIN PCB - MAIN PCB - MAIN PCB - MAIN <SW101> <SW102> <SW103> <SW104>

4-3 ADJUSTMENT METHOD

1. B + & HV voltage adjustment:
 - A. Chroma-2000 Signal generator or PC equivalent set mode 1, VGA 640X480 pattern 1.0 .
 - B. Connect a DC Volt meter between D925 cathode and ground, then adjust VR902 to be 65.0 VDC for CPT CRT.
2. Factory preset Timings Adjustment:
 - A. Press MENU Key to show OSD window press Up or Down Key to switch the functional controls.
 - B. Press the Up Key to select the  function, then press the SELECT Key. While do not release the SELECT Key until the OSD window changed to the Factory preset window.
 - C. The Factory preset window contains the following functional controls. Select one of the control. Then press the Up/Down Key to adjust its value for the optimum picture.

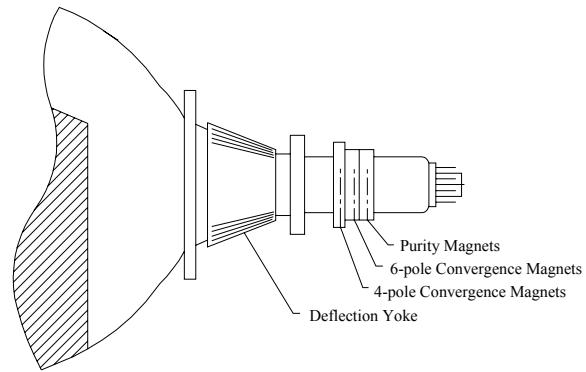

(The OSD menu for factory preset FOR WT CPU)

	H-SIZE		V-MOIRE REDUCE
	H-CENTER		H-MOIRE REDUCE
	V-SIZE		MOIRE DISABLE
	V-CENTER		H-REGULATION
	PINCUSHION		V-REGULATION
	PARALLELOGRAM		H-LINEAR
	PIN-BALANCE		V-LINEARITY
	TRAPEZOID		V-LINEARITY
	ROTATION		TOP CORNER
	NO USE		BOT CORNER
	ABL		NO USE
	CONTRAST		MAX-HSIZE MODIFY
	BRIGHTNESS		MAX-VSIZE MODIFY
	R-BIAS		MAX-TRAPEZOID MODIFY
	G-BIAS		BURN IN
	R-BIAS		DEGAUSS
	R-GAIN		OSD EXIT
	G-GAIN		RETURN
	B-GAIN		BURN IN TIME
9300	COLOR TEMPERATURE		COLOR TEMPERATURE
6500	COLOR TEMPERATURE		FREQUENCY SELECT
	RETURN		

- D. To switches the input signal to the other Timing Mode. Please follow step A ~ C to get the optimum picture.(H/V-size:312*234mm)
- E. Select the " " RETURN function and press the MENU Key, then the Factor Preset window will be returned to the original OSD window.(user's operating condition)
- F. The setting data of the CONTRAST, BRIGHTNESS, ROTATION, COLOR TEMPERATURE are common mode saved in the memory. Don't needed adjust it individual at every timing Mode and save in the memory.

3. White Balance adjustment:
 - A. Choose key  of OSD and press it for above 10s,then enter into factory setting area for modulation.
 - B. Brightness & contrast ratio MAX, fix to G-BIAS,fix to 40.
 - C. Raster Max modulation: Raster Pattern, adjust R or B bias and G2, make $x=271\pm10$, $y=301\pm10$, $Y=1.50\pm0.2$ cd/m²
 - D. Raster cut off modulation: Raster Pattern, adjust brightness to make Cut off: 0.34 ± 0.01 cd/m²,and then put 9300K & 6500K into it.
 - E. Small white screen appears(P149), Raster 0.34 ± 0.01 cd/m²,set R or G or B gain,make $x=283\pm10$, $y=297\pm10$, $Y=145\pm1$ cd/m²,then save it into 9300K color temperature, set R or G or B gain, make $x=313\pm10$, $y=329\pm10$, then save it into 6500K color temperature.
 - F. White screen appears, Raster 0.34 ± 0.01 cd/m², adjust factory AB value, make it 9300K, color temperature $Y=108\pm1$ cd/m².
 - G. Raster modulation, adjust brightness and make it for: 0.04 ± 0.01 cd/m²
 - H. White screen appears,brightness cut off, set R or G or B gain,make $x=313\pm10$, $y=329\pm10$, $Y=80\pm1$ cd/m²,then save it into sRGB color temperature, then exit factory setting area.
 - I. After modulation, it's necessary to check if the white balance accords with the normal specification. If not, which needs reset.
4. Focus Adjustment:
 - A. Set mode 6 1024×768, PATTERN 101 , Fv: 85Hz with character full page.
 - B. Set for under RECALL state .
 - C. Then adjust focus VR1 to a fine vertical line.
 - D. Adjust focus VR2 to a fine horizontal line.
 - E. Repeat step C & D.
5. Purity Adjustment
 - A. Be sure that the display is not being exposed to any external magnetic fields.
 - B. Ensure that the spacing between the Purity, Convergence, Magnet, (PCM), assembly and the CRT stem is 29mm. (See below diagram)
 - C. Produce a complete, red pattern on the display. Adjust the purity magnet rings on the PCM assembly to obtain a complete field of the color red. This is done by moving the two tabs in such a manner that they advance in an opposite direction but at the same time to obtain the same angle between the two tabs, which should be approximately 180'.
 - D. Check the complete blue and complete green patterns to observe their respective color purity. Make minor adjustments if needed.

RELATIVE PLACEMENT OF TYPICAL COMPONENTS

6. Convergence adjustment

- A. Produce a magenta crosshatch on the display.
- B. Adjust the focus for the best overall focus on the display.
Also adjust the brightness to the desired condition.
- C. Vertical red and blue lines are converged by varying the angle between the two tabs of the 4 pole magnets on the PCM assembly. (See above diagrams)
- D. Horizontal red and blue lines are converged by varying the two tabs together, keeping the angle between them constant.
- E. Produce a white crosshatch pattern on the display.
- F. Vertical green and magenta lines are converged by varying the angle between the two tabs of the 6-pole magnets.
- G. Horizontal green and magenta lines are converged by varying the two tabs together, keeping the angle between them constant.

5. CIRCUIT DESCRIPTION

5-1 MICRO CONTROLLER CIRCUIT

MICRO Controller

The IC101 contains a 6502/8051 8-bit CPU core, 512 bytes of RAM, 16K bytes of ROM, 14 channel 8 bit PWM D/A converters, 2 channel A/D converters for key detection, one 8 bit pre-loadable base timer, internal H-sync and V-sync signals processor providing mode detection, watch-dog timer preventing system from abnormal operation, and an I²C bus interface.

H/V sync signals processor

The functions of the sync processor include polarity detection, H-SYNC & V-SYNC signals counting, Programmable SYNC signals output, free running signal generator. Pin41/Pin42 are for the H-SYNC and V-SYNC input, Pin33/Pin34 will output the same signal as input sync signal without delay, and the polarity are setting in the positive. When no signal input, the Pin33 will output a 72Hz V-SYNC free run signal. The Pin34 will output a 48KHz H-SYNC free run signal. for the monitor testing use.

5-2 DEFLECTION CIRCUIT

The deflection circuit is achieved by a high performance and efficient solution IC401 (STV9118) for this monitor. The concept is fully DC controllable and can be used in applications with a micro-controller solutions.

The STV9118 provides sync. Processing with full auto sync. Capability, a flexible SMPS block and an extensive set of geometry control facilities. Further the IC generates the drive waveforms for DC coupled vertical boosters to the TDA9302A.

Horizontal Oscillator

The oscillator is of the relaxation type and requires a capacitor of C409 at pin6. The free running frequency is determined by a resistor R412 from pin8 to ground.

PLL 1 Phase Detector

The phase detector is a standard one using switched current sources. It compares the middle of H-sync. with a fixed point on the oscillator saw-tooth voltage. The PLL loop filter C435, C437, R411 is connected to Pin9.

PLL2 Phase Detector

This phase detector is similar to the PLL1 detector and compares the line flyback pulse at pin 12 with the oscillator saw-tooth voltage. The PLL2 detector thus compensates for the delay in the external H-deflection circuit by adjusting the phase of the HDRV output pulses. The phase between H-flyback and H-sync can be controlled at pin5.

X-ray Protection

The X-ray protection input pin25 provides a voltage detector with a precise threshold. If the voltage exceeds this threshold for a certain time, an internal latch switches the whole IC into protection mode. In this mode several pins are forced into defined states:

Pin28 (BDRV) is floating
Pin26 (HDRV) is floating

Vertical Oscillator

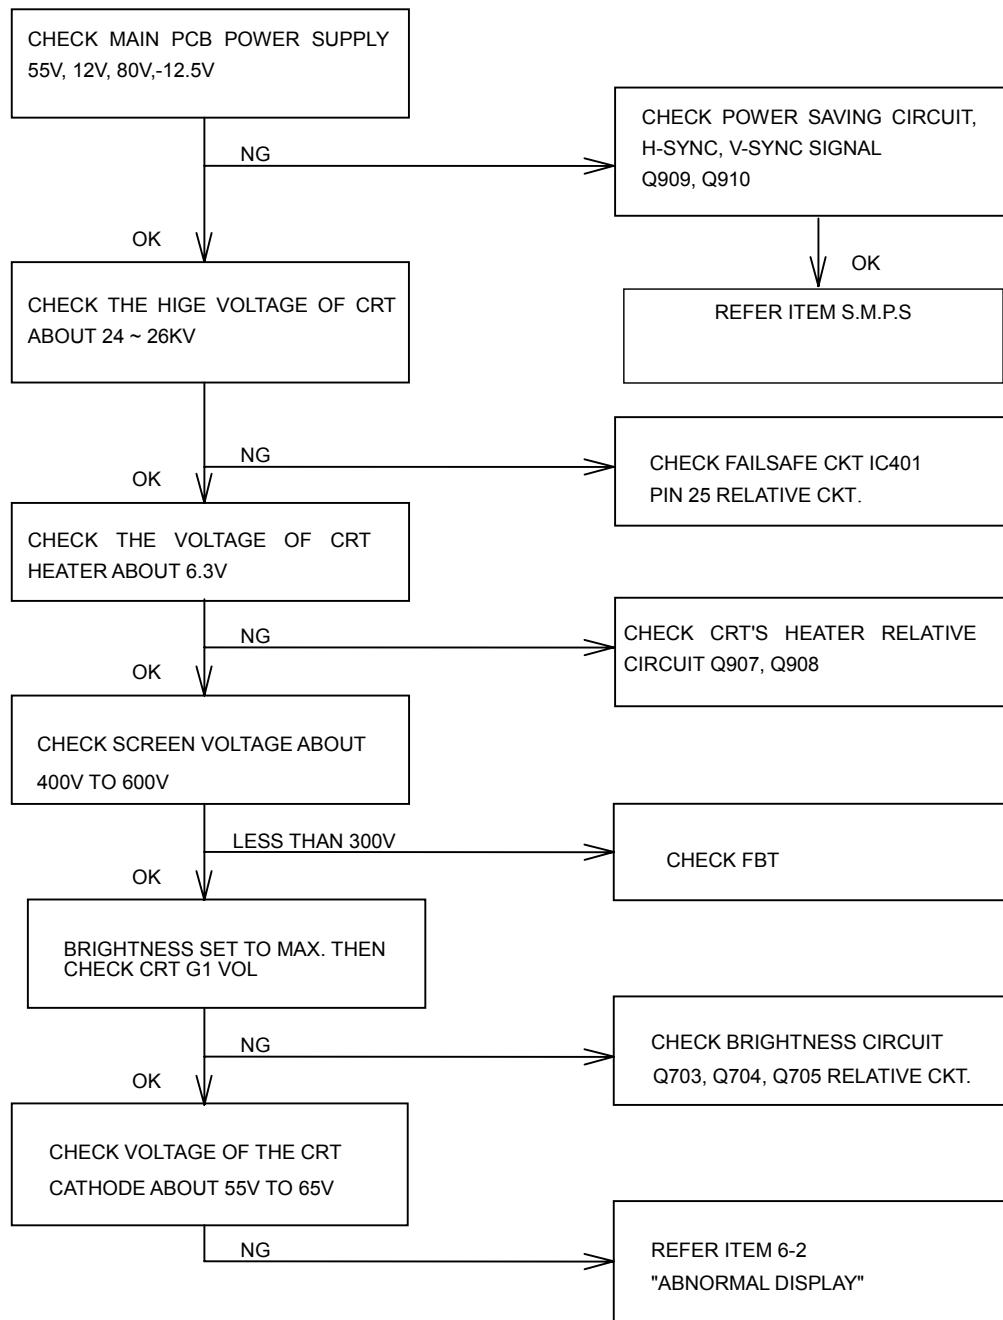

The vertical free -running frequency is determined by the capacitance C613 at pin22. Usually the free-running frequency should be lower than the minimum trigger frequency.

5-3 TRANSISTOR & DIODE CIRCUIT

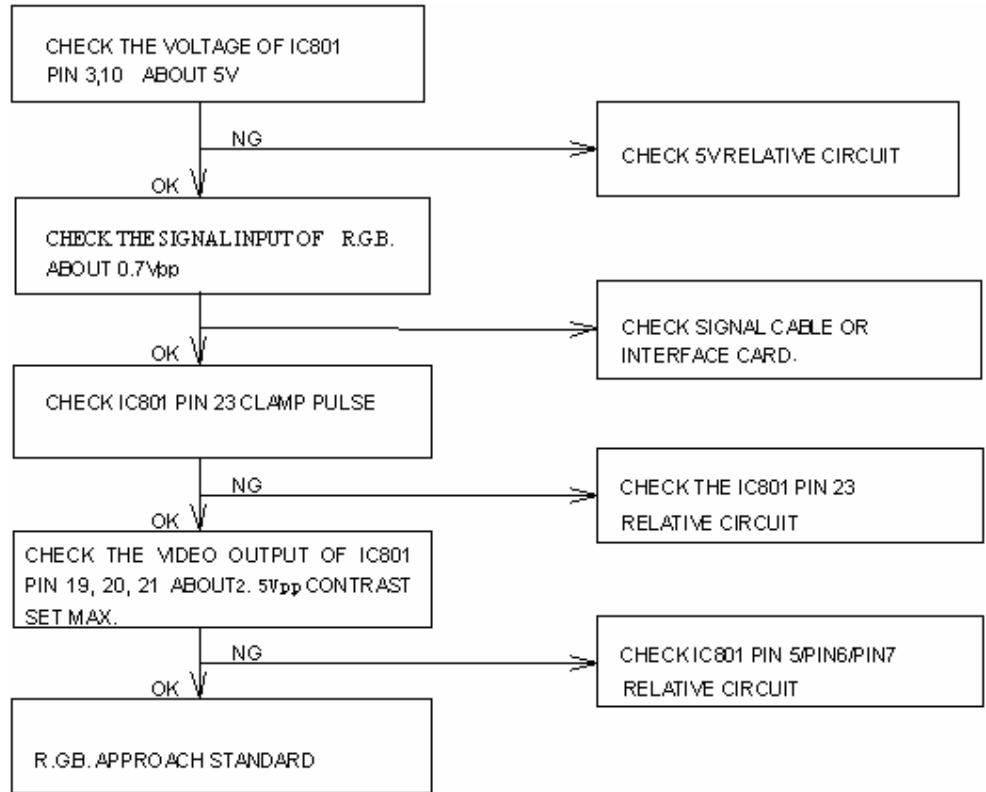

LOCATION	CIRCUIT FUNCTION DESCRIPTION
D901~D904	Bridge Rectifier for AC Source
D910	Clamp Diode for snub CKT
D919	Rectifier for Output Voltage
D922	Rectifier for Output Voltage
D923	Rectifier for Output Voltage
D925	Rectifier for B+ Supply
D929	B+ Feed Back Rectifier from F.B.T Pulse
IC901	Power IC for Switching Power Control. (Build-in MOS FET)
Q907, Q908	Use for Power Saving to Cut-off 6.3V Supply Voltage
Q909, Q910	Use for Power Saving to Cut-off 12.5V Supply Voltage
Q912, Q920	Push-Pull Topology to Drive Q911
Q913	Degaussing Switcher Transistor
Q904	5V Regulator Transistor
Q403	HOR. Driver Transistor
IC403	Horizontal s correction control MOSFET(Four in one)
Q404, Q405	As Differential Amp. to Drive Q406
Q406	Transistor for H-Size Control
Q705	Brightness Control CKT
Q742	V-Dynamic focus CKT

6.TROUBLE SHOOTING CHART
